

# Get the best of the cloud on-premises with VMware vSphere+

Harness the power of multi-cloud to accelerate innovation and transform businesses.

## Why choose a subscription model?

On-premises workloads can't leverage cloud benefits, including hyper-scaling, universal access, low maintenance, developer agility, resilience, and flexible consumption benefits.

Perpetual licensing schemes don't support current business needs. This leads to entitlement gaps or accidental end user licensing agreement (EULA) compliance violations.

## Transform on-premises business

Businesses can empower IT admins, developer teams and decision makers, by enhancing on-premises workloads with cloud services.

- Get cloud benefits and enhance existing vSphere deployments without disrupting workloads.
- Activate add-on hybrid cloud services to expedite disaster recovery, ransomware protection, and capacity planning.
- Gain the flexibility of OpEx-based consumption, while improving ROI from existing investments.

## A unified and consistent cloud experience

vSphere+ supports the best experience for workloads, no matter where your workloads run.

- The multi-cloud platform brings the benefits of the cloud to on-premises.
- IT admins and developers can easily build, run, manage, protect, and secure traditional and next-gen applications.
- vSphere+ combines industry-leading virtualization technology, an enterprise-ready Kubernetes environment, and high-value cloud services.
- Transform existing on-premises deployments into SaaS-enabled infrastructure, which can be purchased through a flexible and scalable subscription plan.

## The Cloud Console

vSphere+ connects vCenter instances to VMware Cloud for centralized management. A vCenter cloud gateway is installed on-premises and connects with vCenter to collect the minimal data needed for display within the VMware Cloud Console. This enables businesses to:

- Monitor the entire vSphere estate.
- Centrally monitor events, alerts, and resource capacity.
- Identify unaddressed security vulnerabilities.
- Update vCenter instances in minutes, with a single click.
